

B
B contains the samples of at least said quantised subsignals ~~(if present)~~.

23
28.

B
B A transmission system as claimed in Claim 7, in which the receiver ~~comprises a decoder~~ ^{comprises} a synthesis-filter means responsive to the respective quantised subband signals to construct a replica of the ~~wide-band~~ ^{narrow} digital signal, which synthesis filter means combine the subbands, applying sample frequency restoration to form the signal band of the wide-band digital signal, characterized in that the samples of the subband signals ~~(if present)~~ are inserted in the third frame portion in a sequence corresponding to the sequence in which said samples are applied to the synthesis-filter means upon reception in the receiver.
